Veteran-owned firms, 2012	27
Nonveteran-owned firms, 2012	151
GEOGRAPHY	

Geography	
Population per square mile, 2010	9.7
Land area in square miles, 2010	414.89
FIPS Code	13101

#### Value Notes

A This geographic level of poverty and health estimates is not comparable to other geographic levels of these estimates

Some estimates presented here come from sample data, and thus have sampling errors that may render some apparent differences between geographies statistically indistinguishable. Click the Quick Info left of each row in TABLE view to learn about sampling error.

The vintage year (e.g., V2016) refers to the final year of the series (2010 thru 2016). Different vintage years of estimates are not comparable.

Fact Notes

- (a) Includes persons reporting only one race
- (b) Hispanics may be of any race, so also are included in applicable race categories
- (c) Economic Census Puerto Rico data are not comparable to U.S. Economic Census data

Value Flags

- Either no or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowes interval of an open ended distribution.
- D Suppressed to avoid disclosure of confidential information
- F Fewer than 25 firms
- FN Footnote on this item in place of data
- NA Not available
- S Suppressed; does not meet publication standards X Not applicable
- X Not applicableZ Value greater than zero but less than half unit of measure shown

QuickFacts data are derived from: Population Estimates, American Community Survey, Census of Population and Housing, Current Population Survey, Small Area Health Insurance Estimates, Small Area Poverty Estimates, State and County Housing Unit Estimates, County Business Patterns, Nonemployer Statistics, Economic Census, Survey of Business Owners, Building Permits.

#### 3. Community Work Program

#### ECHOLS COUNTY FIVE-YEAR SHORT-TERM WORK PROGRAM UPDATE (2016 - 2020)

	Goal	Estimated	Funding					
PROJECTS	Goar	Cost / Resp.	T unturing	FY 16	FY 17	FY 18	FY 19	FY 20
PLANNING								
Re-instate the Echols County Planning Commission to implement the Comprehensive Plan	1	\$2,500/y BOCC	General Fund				х	
NATURAL AND CULTURAL RESOURCES								
Seek grants and provide technical assistance to Echols County Historical Society with the development of the museum of local history	1	\$500/y BOCC	General Fund	Х	X	X	X	x
Use completed historical resource inventory to preserve properties and use to encourage visitors and tourism to further the camera ready program.	1	\$1,500/y BOCC	General Fund	х	х	х	х	x
Hire a code officer to enforce environmental ordinances	3,4	\$15,000/y BOCC	General Fund, available grants			х	х	
HOUSING								
Develop a list of potential grants and funding sources for financing a housing rehabilitation program.	3	(Cost \$100) BOCC	General Fund	X	х	х		
Establish a housing rehabilitation program for dilapidated areas throughout the County.	3	(Cost 2,500) BOCC	General Fund				x	x
Revitalize single family housing that can be used for affordable housing through available grants and housing programs.	3	(Cost \$500,000) BOCC	CHIP, CDBG, Enterprise Zone		X	X		
ECONOMIC DEVELOPMENT								
Create an Industrial Development Authority to serve as the public catalyst for economic development	2	(Cost \$2,500) BOCC	General Fund		х	х	х	
Identify available land to purchase for a public industrial park	2	\$1,000 BOCC	General Fund	х	х			

PROJECTS	Goal	Estimated Cost / Resp.	Funding	FY 16	FY 17	FY 18	FY 19	FY 20
Develop a public industrial park with infrastructure (roads, water, sanitary sewer, etc.)	2	\$500,000 BOCC /Industrial Dev. Authority	EIP, One Georgia and USDA Grants				x	x
Recruit new industries to place in the industrial park, and further develop and expand existing industries through financial incentives and designation of industrial park as an Opportunity Zone.	2	(Cost \$5,000) BOCC /Industrial Dev. Authority	General Fund	x	x	x	x	x
Continue to pursue all applicable grants, loans, and technical assistance that will help enhance the community and foster economic development, including CDBG grants.	2	(Cost \$5,000) BOCC/Industrial Dev. Authority	General Fund	х	х	х	х	x
Become a Camera Ready Community to attract visitors and businesses	2	\$5,000 BOCC	General Fund	х	х	Х	х	X
Update the County website to raise awareness and promote the County	2	\$10,000 BOCC	General Fund	х	х	х	х	X
LAND USE								
Prepare and adopt a land development regulations, which assists in implementing the Echols County Comprehensive Plan, revitalizes blighted areas, and regulates subdivisions and mobile home parks.	3,4,5	(Cost \$5,000) BOCC/SGRC	General Funds	x	x	x	x	x
COMMUNITY FACILITIES & SERVICES								
Hire 2 new deputies as needed.	6	(\$60,000) BOCC	COPS Hiring Grant			Х	х	х
Upgrade police communication devices on as need basis.	6	\$15,000 - \$20,0000 BOCC	JAG Grants, General Fund	x	x	x		
Purchase for volunteer fire services (Air packs, fire service training, communication devices, Class A Pumper, one fire truck) on an as needed basis.	6	(\$497,000) BOCC / SGRC	AFG Grant	x	x	x	x	x
Pursue funding for the upgrading of the intersection at GA 94 and State Route 135 by renovating buildings and landscaping in order to attract more businesses.	3,6	(\$50, 000) BOCC / SGRC	GDOT		x	x	x	x
Install a new kitchen and 2 new bathrooms in the Court House	1,6	(\$50,000) BOCC	General Fund,				x	

	Goal	Estimated	Funding	FY	EX7	<b>D</b> XZ	EXZ	EX7
PROJECTS		Cost / Resp.		F Y 16	FY 17	FY 18	FY 19	FY 20
Seek grant funds to construct a paved walking trail at Recreation Dept.	6	(Cost \$1,000) BOCC	DNR Grant			х	х	x
Pave and maintain Coggins Farm Road.	6	(Cost TBD) BOCC	LMIG, General Fund	х	х	х	х	x
Prepare preliminary engineering plans and cost estimates for a sanitary sewer collection/treatment system for the Statenville area, County School, and possible new industrial park.	6	\$1,000,000 County /Industrial Dev. Authority	General Fund, CDBG			x	x	x
Improve Road Department Shop and purchase new equipment: 2 graders, 1 side cutter, 1 dump truck	6	(Cost \$500,000) BOCC	General Fund ,GEFA		x	x	x	x
Apply to the AFG for a fire truck pumper and equipment	6	\$215,000 BOCC/SGRC	AFG Grant		х	х	х	х
Research and review ways the community can improve its fire protection services and its ISO rating, and implement those measures.	6	(Cost \$7,500) BOCC	General Fund	x	х	x		
Investigate potential funding sources to assist the community improve its water utilities services.	6	(Cost \$5,000) BOCC	General Fund	х				
Expand the existing Board of Commissioners building to add office and storage space.	6	\$50,000 BOCC	General Fund					x
Improve the intersections of Spur Road and Highway 94 and Highway 129.	2	(Cost \$250,000) GDOT, BOCC	LMIG, General Fund		х	х	х	
Create a committee to research the feasibility of providing sewer services through the County for Statenville.	6	(Cost \$3,000) BOCC	General Fund			х	х	Х
Establish recreational programs for youth	6	(Cost \$7,500) BOCC	General Fund		х			
Create a public/private partnership between the water authority and the County Commission to address water issues, and enable the County to apply for CDBG grants to improve water supply and storage capability.	6	Cost \$8,500) BOCC	General Fund	х				

GEORGIA FORESTRY C 0 M M I S S I 0 N

A Program of the Georgia Forestry Commission with support from the U.S. Forest Service

Community Wildfire Protection Plan An Action Plan for Wildfire Mitigation and Conservation of Natural Resources

# **Echols County, Georgia**

SEPTEMBER 12, 2012

Prepared by; Jason Squires, Chief Ranger, Echols County Will Fell CWPP Specialist Georgia Forestry Commission 207 Hwy 129 Statenville, GA 31648

The following report is a collaborative effort among various entities; the representatives listed below comprise the core decision-making team responsible for this report and mutually agree on the plan's contents:

Jimmy Bennett Chief Echols County Fire Department (229) 834-4207 <u>echolsfiredept@bellsouth.net</u>

Derek Herring Chair Echols Board of Commissioners (229) 563-2023 flatwoodsfp@att.net

Robert Martin Echols County Board of Commissioners (229) 559-6538

Jason Squires Georgia Forestry Commission (229) 559-5694 phester@gfc.state.ga.us

#### PREFACE

I.	Objectives
II.	Community Collaboration
III.	Community Background and Existing Situation
IV.	Community Base Map
V.	Community Wildfire Risk Assessment 11
VI.	Community Hazards Map 15
VII.	Prioritized Mitigation Recommendations
VIII.	Action Plan
IX.	Appended Documents
	Echols County Wildfire Pre-suppression Plan

NFPA 1141 Standard for Fire Protection Infrastructure for Land Development in Suburban and Rural Areas.

# Preface

The extreme weather conditions that are conducive to wildfire disasters (usually a combination of extended drought, low relative humidity and high winds) can occur in this area of Georgia as infrequently as every 10-15 years. This is not a regular event, but as the number of homes that have been built in or adjacent to forested or wildland areas increases, it can turn a wildfire under these weather conditions into a major disaster. Wildfires move fast and can quickly overwhelm the resources of even the best equipped fire department. Advance planning can save lives, homes and businesses.

This Community Wildfire Protection Plan (CWPP) includes a locally assessed evaluation of the wildland urban interface areas of the county, looking at the critical issues regarding access to these areas, risk to properties from general issues such as building characteristics and "fire wise" practices and response from local fire fighting resources. It further incorporates a locally devised action plan to mitigate these risks and hazards though planning, education and other avenues that may become available to address the increasing threat of wildland fire. The CWPP does not obligate the county financially in any way, but instead lays a foundation for improved emergency response if and when grant funding is available to the county.

The Plan is provided at no cost to the county and can be very important for county applications for hazard mitigation grant funds through the National Fire Plan, FEMA mitigation grants and Homeland Security. Under the Healthy Forest Restoration Act (HFRA) of 2003, communities (counties) that seek grants form the federal government for hazardous fuels reduction work are required to prepare a Community Wildfire Protection Plan.

This plan will:

- Enhance public safety
- Raise public awareness of wildfire hazards and risks
- Educate homeowners on how to reduce home ignitability
- Build and improve collaboration at multiple levels

The public does not have to fall victim to this type of disaster. Homes (and communities) can be designed, built and maintained to withstand a wildfire even in the absence of fire equipment and firefighters on the scene. It takes planning and commitment at the local level before the wildfire disaster occurs and that is what the Community Wildfire Protection Plan is all about.

# I. OBJECTIVES

The mission of the following report is to set clear priorities for the implementation of wildfire mitigation in Echols County. The plan includes prioritized recommendations for the appropriate types and methods of fuel reduction and structure ignitability reduction that will protect this community and its essential infrastructure. It also includes a plan for wildfire suppression. Specifically, the plan includes community-centered actions that will:

- Educate citizens on wildfire, its risks, and ways to protect lives and properties,
- Support fire rescue and suppression entities,
- Focus on collaborative decision-making and citizen participation,
- Develop and implement effective mitigation strategies, and
- Develop and implement effective community ordinances and codes.

# **II.** COMMUNITY COLLABORATION

The core team convened on October 4<sup>th</sup>, 2011 to assess risks and develop the Community Wildfire Protection Plan. The group is comprised of representatives from local government, local fire authorities, and the state agency responsible for forest management. Below are the groups included in the task force:

Echols County Board of Commissioners Echols County Fire Dept. Georgia Forestry Commission

It was decided to conduct community assessments on the basis individual fire districts in the county. The Chief of the Echols County Fire Department assessed the districts and the core team reconvened on April 24<sup>th</sup>, 2012 for the purpose of completing the following:

Risk Assessment	Assessed wildfire hazard risks and prioritized mitigation actions.
Fuels Reduction	Identified strategies for coordinating fuels treatment projects.
Structure Ignitability	Identified strategies for reducing the ignitability of structures within the Wildland interface.
Emergency Management	Forged relationships among local government and fire districts and developed/refined a pre-suppression plan.
Education and Outreach	Developed strategies for increasing citizen awareness and action and to conduct homeowner and community leader workshops.

#### **III.** COMMUNITY BACKGROUND AND EXISTING SITUATION

#### Background

Echols County, on Georgia's border with Florida, was carved from Clinch and Lowndes counties in 1858 and named in honor of Robert M. Echols, who commanded troops in the Mexican War (1846-48) after serving a total of twenty years in the state legislature. Before white settlers arrived, the inhabitants of the area were Seminole Indians. Sparsely populated, Echols County contains no incorporated towns.

The county seat, Statenville, was first called "Troublesome" after nearby Troublesome Creek. The name was changed when the town was chartered in 1859. There are some stories that its new name was a misreading of "Statesville," which was subsequently used on some maps, but locals believe that the intent was to name it for James W. Staten, a local farmer and store owner. Two wooden courthouses were used from 1859 until 1897, when the second burned down. The business of government was then carried on in rented halls until 1899. The current courthouse was built in 1956. In 1958 the state legislature redrew the city's boundaries to include only the courthouse square; this action resulted in the city's having no residents, and in 1965 Statenville voters turned down the opportunity for a new city charter. Echols County is one of only three in Georgia whose county seat is unincorporated. In addition to Statenville, the county contains the unchartered communities of Fruitland, Haylow, Howell, Mayday, Needmore, Potter, and Tarver.

More than 90 percent of Echols County land is pine forest, most of it privately owned. Historically the economy has been based on agriculture and forestry.

The history of Echols County is dominated by the presence of the Langdale Forest Products Company, founded in 1894 by John Wesley Langdale. Langdale started the business by leasing acres of turpentine timber, and with his sons Billy, Harley, and Noah, he built it into one of the largest wood and wood by-product manufacturers in America. The company owns much of the land in Echols County, although it is based in Valdosta (Lowndes County).

In 1910 the Statenville Railway connected Statenville to Haylow, in the northern part of the county, but the railroad ceased operations in 1924. Despite the county's isolation, residents have joined together to form a unified school system. Between 1898 and 1945, there were seventy-seven schools scattered throughout the county, many of them open just six months a year. School-bus transportation was first provided in 1917, enabling some of the schools to consolidate their operations, and by 1928 the number of schools had been reduced to fourteen. In 1931 the Echols Consolidated School, a brick building in Statenville, was built, and by 1950 all white schoolchildren in the county attended it. Black schools began consolidating in 1941, and in 1948 the Herctoma School was built for African American children. The two schools were integrated in 1970, forming the Statenville Consolidated School. Situated on the campus of the former Echols Consolidated School, the school was added to the National Register of Historic Places in 1988.

According to the 2010 U.S. census, the population of Echols County is 4,034, an increase from the 2000 population of 3,754.

Elizabeth B. Cooksey, Savannah, Courtesy New Georgia Encyclopedia

#### **Existing Situation**

Echols County located deep in south central Georgia, is over 91% forested, despite an agricultural presence scattered in the southwestern corner of the county. While there are large blocks of industrial woodlands in the eastern and central sections of the county, there are homes and communities scattered throughout the western third of the county. The risks and hazards from the wildland urban interface are fairly general and substantial throughout the county.

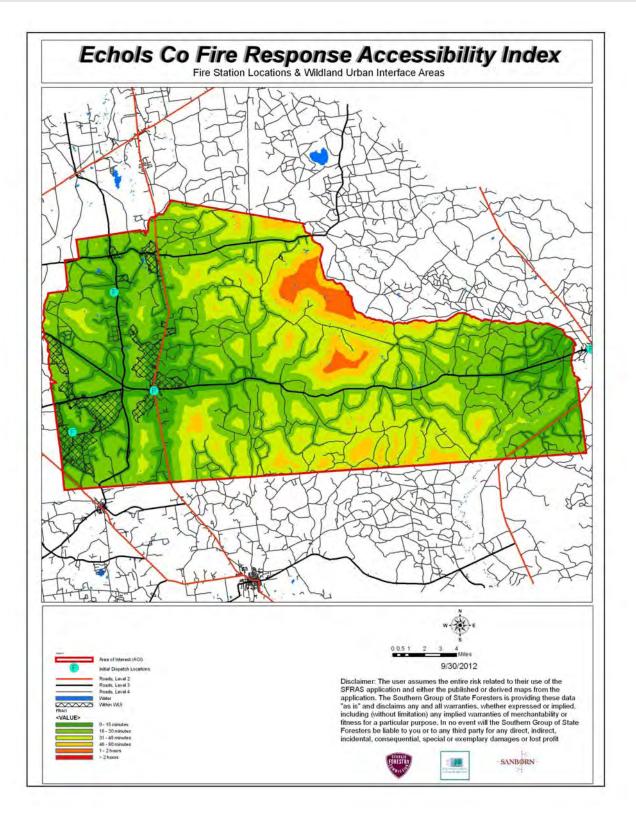

Echols County is protected by three organized volunteer fire departments located in Statenville, Chapel Station and in the Howell community. There is also a mutual aid agreement with the Fargo VFD located in Clinch County to cover the far eastern end of the county. The Georgia Forestry Commission maintains a county protection unit located just north of Statenville on US Hwy 129 to respond to wildfires throughout the county. The community of Statenville is serviced by a pressurized water system with hydrants available.

Over the past 55 years, Echols County has averaged 51 reported wildland fires per year, burning an average of 248 acres per year. Using more recent figures over the past 20 years, this number has dropped somewhat to an average of 43 fires per year burning on average 189 acres annually. While the number of fires during this later period remains rather level throughout the year, the acres burned show a significant increase during the summer months. There is a significant decrease in the acres burned during the remainder of the year, particularly during the fall months.

Over the past 20 years, the leading causes of these fires, was arson and debris burning causing 33% and 23% respectively of the fires and 25% and 29% respectively of the acres burned. Over the past six years records show that over 63% of the debris fires originated from residential burning.

Georgia Forestry Commission Wildfire Records show that in the past nine years, seven homes damaged by wildfire in Echols County resulting in estimated loss of \$149,150 along with six outbuildings valued at \$12,200. Additionally three pieces of mechanized equipment valued at \$100,140 were lost. This is a significant loss of non timber property attributed to wildfires in Echols County.

## **IV. COMMUNITY BASE MAP**

### V. COMMUNITY WILDFIRE RISK ASSESSMENT

#### The Wildland-Urban Interface

There are many definitions of the Wildland-Urban Interface (WUI), however from a fire management perspective it is commonly defined as an area where structures and other human development meet or intermingles with undeveloped wildland or vegetative fuels. As fire is dependent on a certain set of conditions, the National Wildfire Coordinating Group has defined the wildland-urban interface as a set of conditions that exists in or near areas of wildland fuels, regardless of ownership. This set of conditions includes type of vegetation, building construction, accessibility, lot size, topography and other factors such as weather and humidity. When these conditions are present in certain combinations, they make some communities more vulnerable to wildfire damage than others. This "set of conditions" method is perhaps the best way to define wildland-urban interface areas when planning for wildfire prevention, mitigation, and protection activities.

There are three major categories of wildland-urban interface. Depending on the set of conditions present, any of these areas may be at risk from wildfire. A wildfire risk assessment can determine the level of risk.

**1. "Boundary" wildland-urban interface** is characterized by areas of development where homes, especially new subdivisions, press against public and private wildlands, such as private or commercial forest land or public forests or parks. This is the classic type of wildland-urban interface, with a clearly defined boundary between the suburban fringe and the rural countryside.

**2. "Intermix" wildland-urban interface** areas are places where improved property and/or structures are scattered and interspersed in wildland areas. These may be isolated rural homes or an area that is just beginning to go through the transition from rural to urban land use.

**3. "Island" wildland-urban interface**, also called occluded interface, are areas of wildland within predominately urban or suburban areas. As cities or subdivisions grow, islands of undeveloped land may remain, creating remnant forests. Sometimes these remnants exist as parks, or as land that cannot be developed due to site limitations, such as wetlands. (courtesy *Fire Ecology and Wildfire Mitigation in Florida* 2004)

#### Wildland Urban Interface Hazards

Firefighters in the wildland urban interface may encounter hazards other than the fire itself, such as hazardous materials, utility lines and poor access.

#### **Hazardous Materials**

• Common chemicals used around the home may be a direct hazard to firefighters from a flammability, explosion potential and/or vapors or off gassing. Such chemicals include paint, varnish and other flammable liquids, fertilizer, pesticides, cleansers, aerosol cans, fireworks, batteries and ammunition. In addition, some common household products such as plastics may give off very toxic fumes when they burn. Stay out of smoke form burning structures and any unknown sources such as trash piles.

#### **Illicit Activities**

• Marijuana plantations or drug production labs may be found in the wildland urban interface areas. Extremely hazardous materials such as propane tanks and flammable/toxic chemicals may be encountered.

#### **Propane Tanks**

• Both large (household size) and small (gas grill size) liquefied propane gas (LPG) tanks can present hazards to firefighters, including explosion. See the "LPG Tank Hazards" discussion for details

#### **Utility Lines**

• Utility Lines may be located above and below ground and may be cut or damaged by tools or equipment. Don't spray water on utility lines or boxes.

#### **Septic Tanks and Fields**

• Below ground structures may not be readily apparent and may not support the weight of engines or other equipment.

#### **New Construction Materials**

• Many new construction materials have comparatively low melting points and may "offgas" extremely hazardous vapors. Plastic decking materials that resemble wood are becoming more common and may begin softening and losing structural strength at 180 degrees F, though they normally do not sustain combustion once direct flame is removed. However if they continue to burn they exhibit the characteristics of flammable liquids.

#### **Pets and Livestock**

• Pets and livestock may be left when residents evacuate and will likely be highly stressed making them more inclined to bite and kick. Firefighters should not put themselves at risk to rescue pets or livestock.

#### **Evacuation Occurring**

• Firefighters may be taking structural protect actions while evacuations of residents are occurring. Be very cautious of people driving erratically. Distraught residents may refuse to leave their property and firefighters may need to disengage from fighting fire to contact law enforcement officers for assistance. In most jurisdictions firefighters do not have the authority to force evacuations. Firefighters should not put themselves at risk trying to protect someone who will not evacuate!

#### Limited Access

• Narrow one-lane roads with no turn around room, inadequate or poorly maintained bridges and culverts are frequently found in wildland urban interface areas. Access should be sized up and an evacuation plan for all emergency personnel should be developed.

The wildland fire risk assessments conducted in 2012 by the Echols County Fire Departments returned a number of communities in the moderate to high range. The risk assessment instrument used to evaluate wildfire hazards to Echols County's WUI was the Hazard and Wildfire Risk Assessment Checklist. The instrument takes into consideration accessibility, vegetation (based on fuel models), roofing assembly, building construction, and availability of fire protection resources, placement of gas and electric utilities, and additional rating factors. The following factors contributed to the wildfire hazard scores for Echols County:

- Unpaved roads and private driveways
- Narrow roads without drivable shoulders and inadequate overhead clearance
- Poor drainage in winter and sugar sand in summer on many roads
- Dead end roads without "turnarounds"
- Isolated homes and buildings
- Lack of uniform address signs
- Minimal defensible space around structures
- Homes with wooden siding
- Mobile homes without fire resistant underpinning
- Lack of pressurized or non-pressurized water systems available
- Large, adjacent areas of forest or wildlands
- Heavy fuel buildup in adjacent wildlands
- High occurrence of wildfires in the several locations
- Lack of homeowner or community organizations

#### Southern Fire Risk Assessment System Maps.

The attached maps were generated from a computerized Geographical Information System (GIS) program developed by the Sanborn Company under contract from the Southern Group of State Foresters to model the various risks to life and property within the southeastern US. The program is known as the Southern Fire Risk Assessment System (SFRAS). It utilizes multiple layers of data developed cooperatively from the various states and the US Forest Service under the Southern Wildfire Risk Assessment (SWRA)

<u>Wildland Urban Interface</u> maps are developed using data from the SILVIS Lab at the University of Wisconsin at Madison. WUI is composed of both interface and intermix communities. In both interface and intermix communities, housing must meet or exceed a minimum density of one structure per 40 acres. Intermix communities are places where housing and vegetation intermingle. In intermix, wildland vegetation is continuous, more than 50 percent vegetation, in areas with more than one house per 40 acres. Interface areas have more than one house per 40 acres, have less than 50 percent vegetation. Interface areas have more than one house per 40 acres, have less than 50 percent vegetation, and are within 1.5 miles of an area (made up of one or more contiguous Census blocks) over 1,325 acres that is more than 75 percent vegetated. The minimum size limit ensures that areas surrounding small urban parks are not classified as interface WUI.

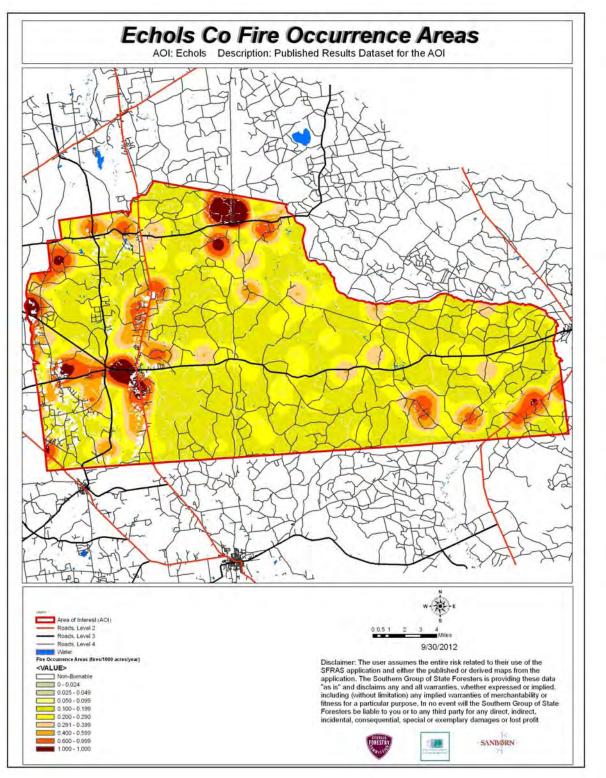

<u>Fire Response Accessibility Index</u> is a relative measure of how long it would take initial attack resources to drive from their station to various areas of the county. This index is derived from assigning average speeds to the various road classes in the county. For the purpose of this analysis the following speeds were assigned: 55 mph for level 1 roads, primarily interstates and four lane open highways, 50 mph for level 2 roads, primarily state and federal highways, 40 mph for level 3 roads, primarily paved two lanes collector roads and 25 mph for level 4 roads, mainly city streets and rural roads, paved and unpaved. For areas away from roads a travel speed of 3 mph is assigned as it is assumed travel will be by foot or extremely slow moving equipment.

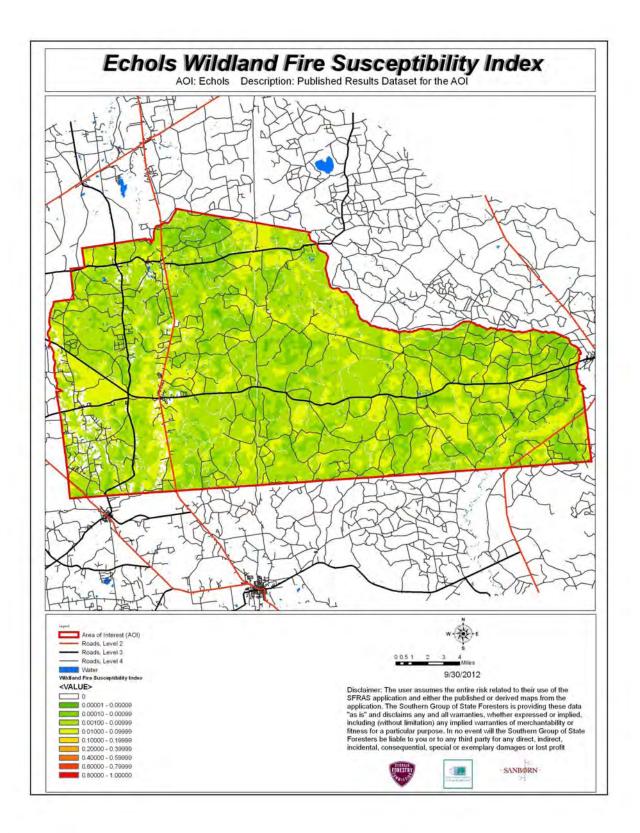

<u>Fire Occurrence Areas</u> maps use data from wildfire reports over the period from 1997-2002. The fire occurrence rates mapped are the probability of the number of fires occurring per 1000 acres per year base on this historic information.

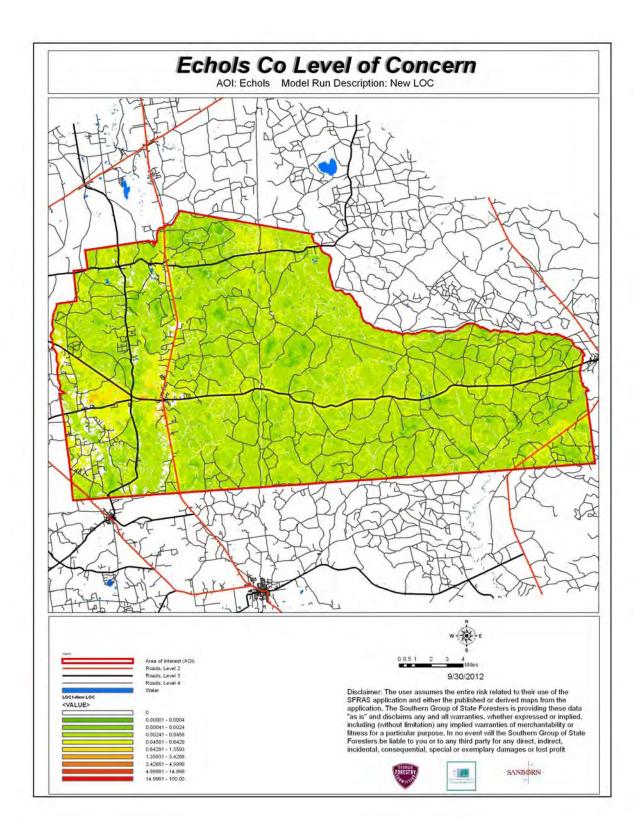

<u>Wildland Fire Susceptibility</u> maps show an index value between 0 and 1 and are developed by a mathematical calculation process for determining the probability of an acre burning and the expected final fire size. Many layers of data are used in developing this calculation including historic fire data, wildland fuels and rate of spread, canopy attributes (closure, height and density), weather influences, topography, soils and fire suppression effectiveness.

<u>Level of Concern</u> maps are a complex calculation using the Wildland Fire Susceptibility Index (previously described) and the Fire Effects Index which is calculated using data layers of transportation and infrastructure, urban interface and timber values along with suppression difficulty ratings. This provides an output categorizing the expected levels of concern from low to high.

### VI. COMMUNITY HAZARDS MAPS

# VII. PRIORITIZED MITIGATION RECOMMENDATIONS

#### **Executive Summary**

As Southern Georgia continues to see increased growth from other areas seeking less crowded and warmer climes, new development will occur more frequently on forest and wildland areas. Echols County will have an opportunity to significantly influence the wildland fire safety of new developments. It is important that new development be planned and constructed to provide for public safety in the event of a wildland fire emergency.

Over the past 20 years, much has been learned about how and why homes burn during wildland fire emergencies. Perhaps most importantly, case histories and research have shown that even in the most severe circumstances, wildland fire disasters can be avoided. Homes can be designed, built and maintained to withstand a wildfire even in the absence of fire services on the scene. The national Firewise Communities program is a national awareness initiative to help people understand that they don't have to be victims in a wildfire emergency. The National Fire Protection Association has produced two standards for reference: NFPA 1144 Standard for Reducing Structure Ignition Hazards from Wildland Fire. 2008 Edition and NFPA 1141 Standard for Fire Protection Infrastructure for Land Development in Suburban and Rural Areas.

When new developments are built in the Wildland/Urban Interface, a number of public safety challenges may be created for the local fire services: (1) the water supply in the immediate areas may be inadequate for fire suppression; (2) if the Development is in an outlying area, there may be a longer response time for emergency services; (3) in a wildfire emergency, the access road(s) may need to simultaneously support evacuation of residents and the arrival of emergency vehicles; and (4) when wildland fire disasters strike, many structures may be involved simultaneously, quickly exceeding the capability of even the best equipped fire departments.

The following recommendations were developed by the Echols County CWPP Core team as a result of surveying and assessing fuels and structures and by conducting meetings and interviews with county officials. A priority order was determined based on which mitigation projects would best reduce the hazard of wildfire in the assessment area.

Primary Protection for Community and Its Essential Infrastructure												
Treatment Area	Treatment Types	Treatment Method(s)										
1. All Structures	Create minimum of 30- feet of defensible space**	Trim shrubs and vines to 30 feet from structures, trim overhanging limbs, replace flammable plants near homes with less flammable varieties, remove vegetation around chimneys.										
2. Applicable Structures	Reduce structural ignitability**	Clean flammable vegetative material from roofs and gutters, store firewood appropriately, install skirting around raised structures, store water hoses for ready access, and replace pine straw and mulch around plantings with less flammable landscaping materials.										
3. Community Hazards	Utility services	Work with GA Power and EMC's to encourage new underground service to rural homes. Adopt standards for safety zone around propane distribution tanks.										
4. Driveway Access	Right of Way Clearance	Maintain vertical and horizontal clearance for emergency equipment. See that adequate lengths of culverts are installed to allow emergency vehicle access.										
5. Road Access	Identify needed road improvements	As roads are upgraded, widen to minimum standards with at least 50 foot diameter cul de sacs or turn arounds.										
6. Codes and Ordinances	Examine existing codes and ordinances.	Amend and enforce existing building codes as they relate to skirting, propane tank locations, public nuisances (trash/debris on property), Property address marking standards and other relevant concerns Review the need for subdivision and development ordinances for public safety concerns. Enforce uniform addressing ordinance.										
7. Law Enforcement	Traffic control	Work with local law enforcement to better control non essential traffic during fire emergencies.										

#### **Proposed Community Hazard and Structural Ignitability Reduction Priorities**

Treatment Area	Treatment Types	Treatment Method(s)
1. Adjacent WUI Lands	Reduce hazardous fuels	Encourage prescribed burning for private landowners and industrial timberlands particularly adjacent to residential areas. Seek grant for mowing or prescribed burning in WUI areas.
2. Railroad Corridors	Reduce hazardous fuels	Encourage railroads to better maintain their ROW eliminating brush and grass through herbicide and mowing. Maintain firebreaks along ROW adjacent to residential areas.
3. Existing Fire Lines	Reduce hazardous fuels	Clean and re-harrow existing lines.
Proposed Improved Com	munity Wildland Fire Res	ponse Priorities
1. Water Sources	Dry Hydrants	Inspect, maintain and improve access to existing dry hydrants. Add signage along road to mark the hydrants. Need improved drafting equipment,
		floating and turbo draft pumps.
		Investigate possibility of placing compatible fittings on irrigation wells.
		Update GFC Fire plan to include identified helicopter dip sites.
2. Fire Stations	Equipment	Wildland hand tools. Lightweight Wildland PPE Gear.
3. Water Handling	Tanker Capacity	Investigate need for additional tankers and overhead refill tanks at rural stations.
4. Road Names	Road Signage	Improved Road Signage at Crossroads. "Dead End" or "No Outlet" Tags on Road Signs
5. Personnel	Training	Obtain Wildland Fire Suppression training for Fire Personnel.

#### **Proposed Education and Outreach Priorities**

#### 1. Conduct "How to Have a Firewise Home" Workshop for Echols County Residents

Set up and conduct a workshop for homeowners that teach the principles of making homes and properties safe from wildfire. Topics for discussion include defensible space, landscaping, building construction, etc. Workshop will be scheduled for evenings or weekends when most homeowners are available and advertised through local media outlets. Target local schools, community groups and local senior centers.

Distribute materials promoting firewise practices and planning through local community and governmental meetings.

#### 2. Conduct "Firewise" Workshop for Community Leaders

Arrange for GFC Firewise program to work with local community leaders and governmental officials on the importance of "Firewise Planning" in developing ordinances and codes as the county as the need arises. Identify "Communities at Risk" within the county for possible firewise community recognition.

#### 3. Spring Clean-up Event

Conduct clean-up event every spring involving the Georgia Forestry Commission, Echols County Fire Department and community residents. Set up information table with educational materials and refreshments. Initiate the event with a morning briefing by GFC Firewise coordinator and local fire officials detailing plans for the day and safety precautions. Activities to include the following:

- Clean flammable vegetative material from roofs and gutters
- Trim shrubs and vines to 30 feet away from structures
- Trim overhanging limbs
- Clean hazardous or flammable debris from adjacent properties

Celebrate the work with a community cookout, with Community officials, GFC and Echols County Fire Department discussing and commending the work accomplished.

#### 4. Informational Packets

Develop and distribute informational packets to be distributed by realtors, tax office and insurance agents. Included in the packets are the following:

- Be Firewise Around Your Home
- Firewise Guide to Landscape and Construction
- Firewise Communities USA Bookmarks

#### 5. Wildfire Protection Display

Create and exhibit a display for the general public at Carrot Festival and Fourth of July. Display can be independent or combined with the Georgia Forestry Commission display.

Hold Open House at individual Fire Stations to promote Community Firewise Safety and develop community support and understanding of local fire departments and current issues.

#### 6. Press

Invite the local news media to community "Firewise" functions for news coverage and regularly submit press releases documenting wildfire risk improvements in Echols County.

# VIII. ACTION PLAN

#### **Roles and Responsibilities**

The following roles and responsibilities have been developed to implement the action plan:

Role	Responsibility							
Hazardous Fuels and Structural I	gnitability Reduction							
Echols County WUI Fire Council	Create this informal team or council comprised of residents, GFC officials, Echols County Fire Department officials, a representative from the county government along with EMA Director for Echols County. Meet periodically to review progress towards mitigation goals, appoint and delegate special activities, work with federal, state, and local officials to assess progress and develop future goals and action plans. Work with residents to implement projects and firewise activities.							
Key Messages to focus on	1 Defensible Space and Firewise Landscaping							
	2 Debris Burning Safety							
	3 Firewise information for homeowners							
	4 Prescribed burning benefits							
Communications objectives	1 Create public awareness for fire danger and defensible space issues							
	2 Identify most significant human cause fire issues							
	3 Enlist public support to help prevent these causes							
	4 Encourage people to employ fire prevention and defensible spaces in their communities.							
Target Audiences	1 Homeowners							
C	2 Forest Landowners and users							
	3 Civic Groups							
	4 School Groups							
Methods	1 News Releases							
	2 Radio and TV PSA's for area stations and cable access channels							
	3 Personal Contacts							
	4 Key messages and prevention tips							
	5 Visuals such as signs, brochures and posters							

Spring Clean-up Day											
Event Coordinator	Coordinate day's events and schedule, catering for cookout, guest attendance, and moderate activities the day of the day of the event.										
Event Treasurer	Collect funds from residents to cover food, equipment rentals, and supplies.										
Publicity Coordinator	Advertise event through neighborhood newsletter, letters to officials, and public service announcements (PSAs) for local media outlets. Publicize post-event through local paper and radio PSAs.										
Work Supervisor	Develop volunteer labor force of community residents; develop labor/advisory force from Georgia Forestry Commission, Echols County Fire Department and Emergency Management Agency. Procure needed equipment and supplies. In cooperation with local county officials, develop safety protocol. Supervise work and monitor activities for safety the day of the event.										

#### Funding Needs

The following funding is needed to implement the action plan:

Project	Estimated Cost	Potential Funding Source(s)
<ol> <li>Create a minimum of 30 feet of defensible space around structures</li> </ol>	Varies	Residents will supply labor and fund required work on their own properties.
2. Reduce structural ignitability by cleaning flammable vegetation from roofs and gutters; appropriately storing firewood, installing skirting around raised structures, storing water hoses for ready access, replacing pine needles and mulch around plantings with less flammable material.	Varies	Residents will supply labor and fund required work on their own properties.
3. Amend codes and ordinances to provide better driveway access, increased visibility of house numbers, properly stored firewood, minimum defensible space brush clearance, required Class A roofing materials and skirting around raised structures, planned maintenance of community lots.	No Cost	To be adopted by county government.
4. Spring Cleanup Day	Varies	Community Business Donations.
5. Fuel Reduction Activities	\$35/acre	FEMA & USFS Grants

#### POTENTIAL FUNDING SOURCES:

As funding is questionable in these times of tight government budgets and economic uncertainty, unconventional means should be identified whereby the need for funding can be reduced or eliminated. Publications / Brochures –

- FIREWISE materials are available for cost of shipping only at <u>www.firewise.org</u>.
- Another source of mitigation information can be found at <u>www.nfpa.org</u>.
- Access to reduced cost or free of charge copy services should be sought whereby publications can be reproduced.
- Free of charge public meeting areas should be identified where communities could gather to be educated regarding prevention and firewise principles.

#### Mitigation –

- Community Protection Grant:
  - USFS sponsored prescribed burn program. Communities with at risk properties that lie within 3 miles of the USFS border may apply with the GFC to have their forest land prescribed burned free of charge.
- FEMA Mitigation Policy MRR-2-08-01: through GEMA Hazard Mitigation Grant Program (HMGP) and Pre Disaster Mitigation (PDM)
  - To provide technical and financial assistance to local governments to assist in the implementation of long term cost effective hazard mitigation measures.
  - This policy addresses wildfire mitigation for the purpose of reducing the threat to all-risk structures through creating defensible space, structural protection through the application of ignition resistant construction, and limited hazardous fuels reduction to protect life and property.
  - With a complete and registered plan (addendum to the State plan) counties can apply for premitigation funding. They will also be eligible for HMGP if the county is declared under a wildfire disaster.
- GFC Plowing and burning assistance can be provided through the Georgia Forestry Commission as a low cost option for mitigation efforts.
- Individual Homeowners
  - In most cases of structural protection ultimately falls on the responsibility of the community and the homeowner. They will bear the cost; yet they will reap the benefit from properly implemented mitigation efforts.
  - GEMA Grant PDM (See above)

Ultimately it is our goal to help the communities by identifying the communities threatened with a high risk to wildfire and educate those communities on methods to implement on reducing those risks.

#### Assessment Strategy

To accurately assess progress and effectiveness for the action plan, the Echols County WUI Fire Council will implement the following:

- Annual wildfire risk assessment will be conducted to re-assess wildfire hazards and prioritize needed actions.
- Mitigation efforts that are recurring (such as mowing, burning, and clearing of defensible space) will be incorporated into an annual renewal of the original action plan.
- Mitigation efforts that could not be funded in the requested year will be incorporated into the annual renewal of the original action plan.
- Continuing educational and outreach programs will be conducted and assessed for effectiveness. Workshops will be evaluated based on attendance and post surveys that are distributed by mail 1 month and 6 months following workshop date.
- The Echols County WUI Council will publish an annual report detailing mitigation projects initiated and completed, progress for ongoing actions, funds received, funds spent, and in-kind services utilized. The report will include a "state of the community" section that critically evaluates mitigation progress and identifies areas for improvement. Recommendations will be incorporated into the annual renewal of the action plan.
- An annual survey will be distributed to residents soliciting information on individual mitigation efforts on their own property (e.g., defensible space). Responses will be tallied and reviewed at the next Echols County WUI Council meeting. Needed actions will be discussed and delegated.

This plan should become a working document that is shared by local, state, and federal agencies that will use it to accomplish common goals. An agreed-upon schedule for meeting to review accomplishments, solve problems, and plan for the future should extend beyond the scope of this plan. Without this follow up this plan will have limited value

GEORGIA FORESTRY COMMISSION

P. O. Box 819, Macon, GA 31202 1-800-GA-TREES GaTrees.org

The Georgia Forestry Commission provides leadership, service, and education in the protection and conservation of Georgia's forest resources. An Equal Opportunity Employer and Service Provider

# **Appendix D**

#### Echols County HAZARD FREQUENCY TABLE

								Past 10	Past 20	Past 50	
	Number of	Historic	Historic	Year	Year	Year					
	Events in	Years in	Events in	Events in	Events in	Recurrence	Frequency	Record	Record	Record	
	Historic	Historic	Past 10	Past 20	Past 50	Interval	% chance/	Frequency	Frequency	Frequency	
	Record	Record	Years	Years	Years	(years)	year	Per Year	Per Year	Per Year	
Hazard											
Hurricanes/Tropical Storms	4	68	2	4	4	17.00	5.88	0.2	0.2	0.08	
Floods	4	68	1	3	4	17.00	5.88	0.1	0.15	0.08	
Tornadoes	4	68	0	2	4	17.00	5.88	0	0.1	0.08	
Wildfires	2712	50	168	612	2712	0.02	5424.00	16.8	30.6	54.24	
Thunderstorms and Lightning	62	68	32	55	62	1.10	91.18	3.2	2.75	1.24	
Extreme Heat	34	22	34	34	34	0.65	154.55	3.4	1.7	0.68	
Drought	461	19	336	461	461	0.04	2426.32	33.6	23.05	9.22	

NOTE: The historic frequency of a hazard event over a given period of time determines the historic recurrence interval. For example: If there have been 20 HazMat Releases in the County in the past 5 years, statistically you could expect that there will be 4 releases a year.

Realize that from a statistical standpoint, there are several variables to consider. 1) Accurate hazard history data and collection are crucial to an accurate recurrence interval and frequency. 2) Data collection and accuarcy has been much better in the past 10-20 years (NCDC weather records). 3) It is important to include all significant recorded hazard events which will include periodic updates to this table.

By updating and reviewing this table over time, it may be possible to see if certain types of hazard events are increasing in the past 10-20 years.

# **GEMA Worksheet #1**

## **Identify the Hazard**

Date:

What kinds of natural hazards can affect you?

#### Task A. List the hazards that may occur.

- 1. Research newspapers and other historical records
- 2. Review existing plans and reports.
- 3. Talk to the experts in your community, state, or region.
- 4. Gather information on Internet Websites.

.

5. Next to the hazard list below, put a check mark in the Task A boxes beside all hazards that may occur in your community or state.

# Task B. Focus on the most prevalent hazard in your community or state.

- 1. Go to hazard Websites.
- 2. Locate your community or state on the Website map.
- 3. Determine whether you are in a high-risk area. Get more localized information if necessary.
- 4. Next to the hazard list below, put a check mark in the Task B boxes beside all hazards that post a significant threat.

Task	Task	Use this space to record information you find for each of the hazards you
Α	В	will be researching. Attach additional pages as necessary.

# GEMA Worksheet #2 Profile Hazard Events Step 2

County:

Date:

How Bad Can It Get?

Task A. Obtain or create a base map.

GEMA will be providing you with a base map, USGS topos and DOQQ as part of our deliverables to local government for the planning process. Additionally, we will be providing you with detailed hazard layer coverages. These data layers originate from state or nationwide coverage or datasets. Therefore, it is important for local government to assess what you already have at the local level. It is important for you at the local level to have an idea of what existing maps you have available for the planning process. Some important things to think about:

- 1) What maps do we already have in the county that would be relevant to the planning process?
- 2) Have other local plans used maps or mapping technology where there is specific data that is also needed in my local plan?
- 3) What digital maps do we have?
- 4) Do we have any Geographic Information System (GIS) data, map themes or layers or databases here at the local level (or regional) that we can use?
- 5) If we do have any GIS data, where is it located at, and who is our local expert?
- 6) Are there any ongoing GIS or mapping initiatives at the local level in other planning or mapping efforts? If so, what are they, and what are the timetables for completion?
- 7) Are there mapping needs that have been identified at the local level in the past? If so, what are they and when were they identified?
- 8) Of the existing maps, GIS data and other digital mapping information, what confidence do we have at the local level that it is accurate data?

#### Please answer the above questions on a separate sheet of paper and attach to this worksheet.

It is important to realize that those counties that already have GIS and digital mapping, (ie: parcel level data, GPS fire hydrants, etc) higher levels of spatial accuracy and detail will exist for some data layers at the local level. However, for this planning process, that level of detail will not be needed on all layers in the overall mapping and analysis.

You can use existing maps from:

- Road Maps
- USGS topographic maps or Digital Orthophoto Quarter Quads (DOQQ)
- Topographic and/or planimetric maps from other agencies
- Aerial topographic and/or planimetric maps
- Field Surveys
- GIS software
- CADD software
- Digitized paper map

Title of Map	Scale	Date

Task B. Obtain a hazard event profile.	Task C. Record your hazard event profile information.
Avalanche	
<ul> <li>Coastal Storm / Coastal Erosion <ol> <li>Get a copy of your FIRM.</li> <li>Verify that the FIRM is up-to-date and complete.</li> </ol> </li> <li>3. Determine the annual rate of coastal erosion. <ol> <li>Find your design wind speed.</li> </ol> </li> </ul>	<ol> <li>Transfer the boundaries of your coastal storm hazard areas onto your base map.</li> <li>Transfer the BFEs onto your base map.</li> <li>Record the erosion rates on your base map:</li> <li>Record the design wind speed here and on your base map:</li> </ol>
Dam Failure	
Drought	
<ol> <li>Earthquake</li> <li>Go to the <u>http://geohazards.cr.usgs.gov</u> Website.</li> <li>Locate your planning area on the map.</li> <li>Determine your PGA.</li> </ol>	<ol> <li>Record your PGA:</li> <li>If you have more than one PGA print, download or order your PGA map.</li> </ol>
Expansive Soils	
Extreme Heat	
<ol> <li>Flood</li> <li>Get a copy of your FIRM.</li> <li>Verify the FIRM is up-to-date and complete.</li> </ol>	<ol> <li>Transfer the boundaries from your firm onto your base map (floodway, 100-yr flood, 500-yr flood).</li> <li>Transfer the BFEs onto your base map.</li> </ol>
Hailstorm	
Hurricane	
Land Subsidence	
Landslide         1. Map location of previous landslides.         2. Map the topography.         3. Map the geology.         4. Identify thee high-hazard areas on your map.	<ol> <li>Mark the areas susceptible to landslides onto your base map.</li> </ol>
Severe Winter Storm	
Tornado 1. Find your design wind speed.	<ol> <li>Record your design wind speed:</li> <li>If you have more than one design wind speed, print, download or copy your design wind speed zones, copy the boundary of your design wind speed zones on your base map, then record the design wind speed zones on your base map.</li> </ol>
Tsunami

Other           1. Map the hazard.	1. Record hazard event info on your base map.

1. Fill in the goal and its corresponding objective. Use a separate worksheet for each objective. The considerations under each criterion are suggested ones to use; you can revise these to reflect your own considerations (see Table 2-1).

2. Fill in the alternative actions that address the specific objectives the planning team identified in Worksheet #1.

3. *Scoring:* For each consideration, indicate a plus (+) for favorable, and a negative (-) for less favorable.

When you complete the scoring; negatives will indicate gaps or shortcomings in the particular action, which can be noted in the Comments section. For considerations that do not apply, fill in N/A for not applicable. Only leave a blank if you do not know an answer. In this case, make a note in the Comments section of the "expert" or source to consult to help you evaluate the criterion.

#### Goal 1: Minimize damage caused by high winds of Hurricanes/Tropical Storms in Echols County.

Objective #1: Protect life, health and property of residents from high winds of Hurricanes/Tropical Storms.

STAPLEE Criteria	S T						Α	Р			L				E				E

2. Fill in the alternative actions that address the specific objectives the planning team identified in Worksheet #1.

3. Scoring: For each consideration, indicate a plus (+) for favorable, and a negative (-) for less favorable.

When you complete the scoring; negatives will indicate gaps or shortcomings in the particular action, which can be noted in the Comments section. For considerations that do not apply, fill in N/A for not applicable. Only leave a blank if you do not know an answer. In this case, make a note in the Comments section of the "expert" or source to consult to help you evaluate the criterion.

# Goal 3: Enhance the community's ability to issue early warning of Tornadoes in an effective, dependable, and rapid manner.

Objective 2: Enhance the ability of the Echols County Emergency Management Agency to respond effectively and efficiently to emergency needs during and after a Tornado event.

STAPLEE Criteria		S		Т			Α			Ρ			L				E				E		
STAPLEE Criteria	(So	cial)	(Teo	chnic	al)	(Adn	ninisti	rative)	(P	olitic	al)		(Lega	ıl)		(Eco	nomi	c)		(Er	nviron	mental)	
Considerations → for Alternative Actions ↓	Community Acceptance	Effect on Segment of Population	Technical Feasibility	Long-term Solution	Secondary Impacts	Staffing	Funding Allocated	Maintenance / Operations	Political Support	Local Champion	Public Support	State Authority	Existing Local Authority	Potential Legal Challenge	Benefit of Action	Cost of Action	Contributes to Economic Goals	Outside Funding Required	Effect on Land / Water	Effect on Endangered Species	Effect on HAZMAT / Waste Sites	Consistent with Community Environmental Goals	Consistent With Federal Laws
Action Step 1: Become a designated "StormReady Community".	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	N/A	N/A	N/A	N/A	N/A
Action Step 2: Implement the "Community Emergency Response Team" (CERT) program.	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+					N/A	N/A
Action Step 3: Seek funds to purchase 800 mhz (or similar) base station and portable radios for emergency use.	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	N/A	N/A	N/A	N/A	N/A

1. Fill in the goal and its corresponding objective. Use a separate worksheet for each objective. The considerations under each criterion are suggested ones to use; you can revise these to reflect your own considerations (see Table 2-1).

2. Fill in the alternative actions that address the specific objectives the planning team identified in Worksheet #1.

3. *Scoring:* For each consideration, indicate a plus (+) for favorable, and a negative (-) for less favorable.

When you complete the scoring; negatives will indicate gaps or shortcomings in the particular action, which can be noted in the Comments section. For considerations that do not apply, fill in N/A for not applicable. Only leave a blank if you do not know an answer. In this case, make a note in the Comments section of the "expert" or source to consult to help you evaluate the criterion.

#### Goal 3a: Reduce the risks and vulnerability of citizens and critical facilities to Tornado damage.

Objective 1: Protect life, health, and property of residents from force of Tornadoes.

# Community & Life

#### Sunday, November 19, 2017

On Saturday Nov. 11, the City of Lake Park held a Veterans Day Memorial Celebration at the flag pole in front of **City Hall. Residents were** invited to attend along with city officials to show their appreciation to veterans. Pictured are Pamela Barr. Thomas Barn council member-elect, Police Chief James Breletic, Wasyl Wojtaszewski, Mayor Eric Schindler, Council Member **Ronald Carter, Dorothy** Carter, Jennifer Taylor, Carl Taylor, council memberelect and Fran Wilbers.

## The Echols County Emergency Management Agency (EMA)

invites the public to attend the kick-off meeting for planning and updating our local Hazard Mitigation Plan. This plan is renewed every five (5) years. We would welcome any input from our citizens and local business owners. Some of those who will be part of the planning group will be: Planning specialist from GEMHSA (Georgia Emergency Management and Homeland Security Agency), Board of County Commissioners Fire/EMS, Sheriff's Department, Health Department, Code Enforcement, Public Works, Forestry, School Board, and hopefully...you: The meeting will be for an hour on December 6, 2017 at 2:00 p.m. at 110 General DeLoach St., Statenville, GA 31648.

SUBMITTED PHOTO or Lonnie Ledbetter tree assembled on public is invited to will be held here on tick off the holiday

## Smith named Principal of the Year finalist

VALDOSTA - Ivy Smith, principal of Pine Grove Middle School, has been named a finalist for Principal of the Year.

The Georgia Association of Secondary School Principals announced the 2019 Principal of the Year Finalists.

"I am extremely honored to be recognized by GASSP," Smith said. "The Lowndes County School System provides students, teachers, and administrators with first-class opportunities, personalized learning initiatives and continuous support. I have

been privileged to work alongside of outstanding educators, learn from community members and make a positive difference in the lives of students.'

In addition to Smith, the finalists are:

• Kristi Gerrells, White County Middle School, White County.

• Dr. Mark Merges, Creekview High School, Cherokee County. • Dr. Gene Starr, Appling County High School, Appling County. · Mary Beth Thomas,

Wilbanks Middle School, Habersham County.

• Kerensa Wing, Collins Hill High School, Gwinnett, County.

The Principal of the Year finalists were selected from a large pool of applicants, state officials said. The application process involves an extensive review of the performance of their school, based on data provided by the applicants.

Finalists will go through an interview process in Athens to determine who will be named the Georgia Principal of the Year.

The Principal of the Year recognition program is sponsored by the National Association of Secondary School Principals, the Georgia Association of Secondary School Principals, and Association Member Benefit Advisor. The Georgia winner will represent the state in the competition for National Principal of the Year, sponsored by the National Association of Secondary School Principals.

The Principal of the Year program recognizes principals who excel in educational leadership, resolving complex problems, developing self and others, as well as community service.

Ivy Smith, Pine Grove Middle School principal, is in the running for state Principal of the Year.

## Recruitment needs. PLEASE CALL THE VALDOSTA DAILY TIMES AT (229) 244-3400

## **Public Notice**

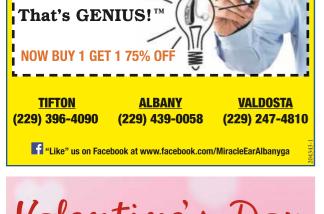

The Echols County Emergency Management Agency (EMA), in cooperation with the Southern Georgia Regional Commission (SGRC), invites the public to attend a Joint Public Hearing to review the Echols County Hazard Mitigation Plan Update and provide an opportunity for public comment. The plan update has been developed in accordance with the Disaster Mitigation Act of 2000, which requires local governments to have an approved Hazard Mitigation Plan addressing natural hazards as a condition of receiving future federal disaster assistance. The County will host a Public Hearing/Open House on March 7 at 6:15 at 110 General Deloach Road, Statenville, GA. Comments are being accepted by email at agodwin@sgrc.us, by fax at 229-333-5312, or by mailing them to Echols HMP, 327 W Savannah Ave., Valdosta, GA 31601. The draft of the Plan is available on the SGRC website, www.sgrc.us. For more information please call Ariel Godwin, Senior Planner at 229-333-5277.

#### **RESOLUTION FOR ADOPTION OF** ECHOLS COUNTY HAZARD MITIGATION PLAN UPDATE

WHEREAS, to be eligible for federal disaster assistance in the event of a presidentially declared disaster and mitigation assistance under the Hazard Mitigation Grant programs, local governments must have adopted or be actively developing a Hazard Mitigation Plan prepared in accordance with federal regulations promulgated pursuant to the Disaster Mitigation Act of 2000 ("the Act"); and

WHEREAS, Echols County adopted the previous Echols County Hazard Mitigation Plan Update in 2014; and

WHEREAS, in accordance with the requirements of the Act, an updated plan is required to be submitted to FEMA through GEMA every five years; and

WHEREAS, the 2014 Plan Update will expire on March 18, 2019 and the new Hazard Mitigation Plan Update will become effective on March 18, 2019; and

WHEREAS, the Echols County Emergency Management Agency, with the assistance of representatives from various other departments and agencies, has developed an updated plan to meet these requirements; and

WHEREAS, the updated plan is titled the "Echols County 2019 Hazard Mitigation Plan Update" (referred to hereafter as "the Plan"); and

WHEREAS, GEMA has notified the Echols County Emergency Management Agency that the Plan satisfies the requirements of the Act:

BE IT THEREFORE RESOLVED that the Echols County Board of Commissioners, meeting in regular session, hereby adopts the Plan.

SO RESOLVED this  $\frac{9}{10}$  day of <u>March</u>, 2019.

Chair

Latrice Bernett

# Introduction

The Federal Disaster Mitigation Act of 2000 (DMA2K) requires state, local, and tribal governments to develop and maintain a mitigation plan to be eligible for certain federal disaster assistance and hazard mitigation funding programs.

Mitigation seeks to reduce a hazard's impacts, which may include loss of life, property damage, disruption to local and regional economies, and the expenditure of public and private funds for recovery. Sound mitigation must be based on a sound risk assessment that quantifies the potential losses of a disaster by assessing the vulnerability of buildings, infrastructure, and people.

In recognition of the importance of planning in mitigation activities, FEMA Hazus-MH, a powerful disaster risk assessment tool based on geographic information systems (GIS). This tool enables communities of all sizes to predict estimated losses from floods, hurricanes, earthquakes, and other related phenomena and to measure the impact of various mitigation practices that might help reduce those losses.

In 2018, the Georgia Department of Emergency Management partnered with The SOUTHERN GEORGIA COMMISSION (SGRC) to develop a detailed risk assessment focused on defining hurricane, riverine flood and tornado impacts for Georgia. This assessment identifies the characteristics and potential consequences of the disaster, how much of the community could be affected by the disaster, and the impact on community assets. In the following years, the Georgia Association of Regional Commissions (GARC) are utilizing this workflow to define impacts in other counties in Georgia. This document provides the results for Echols County.

# Risk Assessment Process Overview

Hazus-MH Version 2.2 SP1 was used to perform the analyses for Echols County. The Hazus-MH application includes default data for every county in the US. This Hazus-MH data was derived from a variety of national sources and in some cases the data are also several years old. Whenever possible, using local provided data is preferred. Echols County provided building inventory information from the county's property tax assessment system. This section describes the changes made to the default Hazus-MH inventory and the modeling parameters used for each scenario.

# **County Inventory Changes**

The default Hazus-MH site-specific point inventory was updated using data compiled from the Georgia Emergency Management Agency (GEMA). The default Hazus-MH aggregate inventory (General Building Stock) was also updated prior to running the scenarios. Reported losses reflect the updated data sets.

General Building Stock (GBS) is an inventory category that consists of aggregated data (grouped by census geography — tract or block). Hazus-MH generates a combination of sitespecific and aggregated loss estimates based on the given analysis and user input. The GBS records for Echols County were replaced with data derived from parcel and property assessment data obtained from Echols County. The county provided property assessment data was current as of December 2018 and the parcel data current as of December 2018. Records without improvements were deleted. The parcel boundaries were converted to parcel points located in the centroids of each parcel boundary; then, each parcel point was linked to an assessor record based upon matching parcel numbers. The parcel assessor match-rate for Echols County is 99.7%. The

generated building inventory represents the approximate locations (within a parcel) of structures. The building inventory was aggregated by census block. Both the tract and block tables were updated. Table 1 shows the results of the changes to the GBS tables by occupancy class.

Occupancy Classification	Default Count	Updated Count	Defa	ault Exposure	Upd	lated Exposure
Agricultural	14	1	\$	2,630,000	\$	576,000
Commercial	29	20	\$	13,596,000	\$	10,725,000
Education	4	0	\$	4,440,000	\$	-
Government	7	3	\$	2,260,000	\$	561,000
Industrial	15	16	\$	4,449,000	\$	43,280,000
Religious	7	0	\$	4,169,000	\$	-
Residential	1500	1726	\$	170,304,000	\$	148,102,000
Total	1576	1766	\$	201,848,000	\$	203,244,000

Table 1: GBS Building	Exposure	Updates b	y Occupancy	y Class*
-----------------------	----------	-----------	-------------	----------

\*The exposure values represent the total number and replacement cost for all Echols County Buildings

For Echols County, the updated GBS was used to calculate hurricane wind losses. The flood losses and tornado losses were calculated from building inventory modeled in Hazus-MH as User-Defined Facility (UDF)<sup>1</sup>, or site-specific points. Figure 1 shows the distribution of buildings as points based on the county provided data.

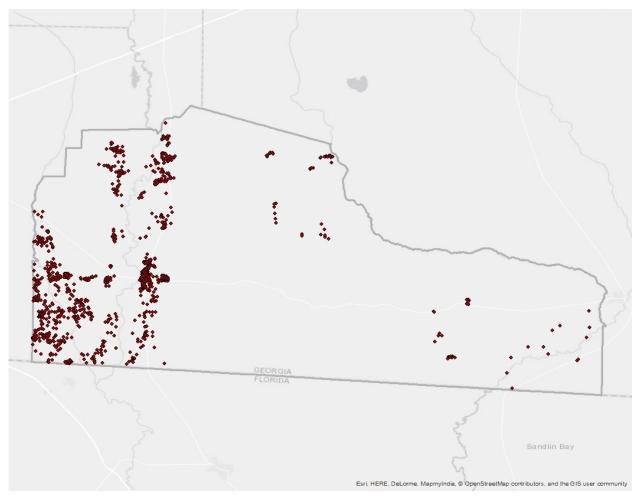

Figure 1: Echols County Overview

<sup>&</sup>lt;sup>1</sup> The UDF inventory category in Hazus-MH allows the user to enter site-specific data in place of GBS data.

## **Essential Facility Updates**

The default Hazus-MH essential facility data was updated to reflect improved information available in the Georgia Mitigation Information System (GMIS). For these risk analyses, only GMIS data for buildings that Hazus-MH classified as Essential Facilities was integrated into Hazus-MH because the application provides specialized reports for these five types of facilities. Essential Facility inventory was updated for the analysis conducted for this report. The following table summarizes the counts and exposures, where available, by Essential Facility classification of the updated data for the county.

Essential facilities include:

- Care facilities
- EOCs
- Fire stations
- Police stations
- Schools

Table 2: Updated	Essential Facilities
------------------	----------------------

Classification	Updated Count	Upda	ted Exposure
	Echols Coun	ty	
EOC	1	\$	880,000
Care	1	\$	610,000
Fire	4	\$	1,164,000
Police	1	\$	250,000
School	3	\$	48,310,000
Total	10	\$	51,214,000

# Assumptions and Exceptions

Hazus-MH loss estimates may be impacted by certain assumptions and process variances made in this risk assessment.

- The Echols County analysis used Hazus-MH Version 2.2 SP1, which was released by FEMA in May 2015.
- County provided parcel and property assessment data may not fully reflect all buildings in the county. For example, some counties do not report not-for-profit buildings such as government buildings, schools and churches in their property assessment data. This data was used to update the General Building Stock as well as the User Defined Facilities applied in this risk assessment.
- GBS updates from assessor data will skew loss calculations. The following attributes were defaulted or calculated:
  - Foundation Type was set from Occupancy Class
  - First Floor Height was set from Foundation Type
  - Content Cost was calculated from Replacement Cost
- It is assumed that the buildings are located at the centroid of the parcel unless building footprints are used. For this analysis of Echols County, parcel centroids were used.
- The essential facilities extracted from the GMIS were only used in the portion of the analysis designated as essential facility damage. They were not used in the update of the General Building Stock or the User Defined Facility inventory.

The hazard models included in this risk assessment included:

- Hurricane assessment which was comprised of a wind only damage assessment
- Flood assessment based on the 1% annual chance event that includes riverine assessments
- Tornado assessment based on GIS modeling

# Hurricane Risk Assessment

# Hazard Definition

The National Hurricane Center describes a hurricane as a tropical cyclone in which the maximum sustained wind is, at minimum, 74 miles per hour (mph)<sup>2</sup>. The term hurricane is used for Northern Hemisphere tropical cyclones east of the International Dateline to the Greenwich Meridian. The term typhoon is used for Pacific tropical cyclones north of the Equator west of the International Dateline. Hurricanes in the Atlantic Ocean, Gulf of Mexico, and Caribbean form between June and November with the peak of hurricane season occurring in the middle of September. Figure 2 shows that many hurricanes have impacted the Atlantic and Gulf coasts of the United States.

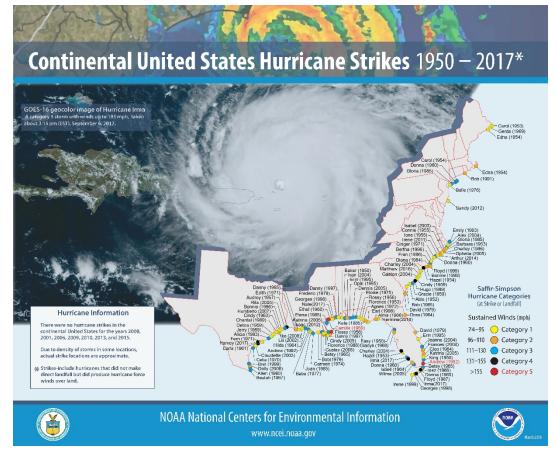

Figure 2: Continental United States Hurricane Strikes: 1950 to 2017<sup>3</sup>

Hurricane intensities are measured using the Saffir-Simpson Hurricane Wind Scale (Table 3). This scale is a 1 to 5 categorization based on the hurricane's intensity at the indicated time.

<sup>&</sup>lt;sup>2</sup> National Hurricane Center (2011). "Glossary of NHC Terms." National Oceanic and Atmospheric Administration. http://www.nhc.noaa.gov/aboutgloss.shtml#h. Retrieved 2-23-2012.

<sup>&</sup>lt;sup>3</sup> Source: NOAA National Climatic Data Center

Category	Wind Speed (mph)	Damage
1	74 – 95	Very dangerous winds will produce some damage
2	96 - 110	Extremely dangerous winds will cause extensive damage
3	111 - 130	Devastating damage will occur
4	131 -155	Catastrophic damage will occur
5	> 155	Catastrophic damage will occur

#### Table 3: Saffir-Simpson Hurricane Wind Scale

Hurricanes bring a complex set of impacts. The winds from a hurricane produce a rise in the water level at landfall called storm surge. Storm surges produce coastal flooding effects that can be as damaging as the hurricane's winds. Hurricanes bring very intense inland riverine flooding. Hurricanes can also produce tornadoes that can add to the wind damages inland. In this risk assessment, only hurricane winds, and coastal storm surge are considered.

The National Oceanic and Atmospheric Administration's National Hurricane Center created the HURDAT database, which contains all of the tracks of tropical systems since the mid-1800s. This database was used to document the number of tropical systems that have affected Echols County by creating a 20-mile buffer around the county to include storms that didn't make direct landfall in Echols County but impacted the county. Since 1851, Echols County has had 62 tropical systems within 20 miles of its county borders (Table 4).

Category Definitions:

TS – Tropical storm

TD – Tropical depression

CAT\_1 – Category 1 (same format for 2, 3, 4 and 5)

E – Extra-tropical cyclone

# Probabilistic Hurricane Scenario

The following probabilistic wind damage risk assessment modeled a Category 1 storm with maximum winds of 85 mph.

# Wind Damage Assessment

Wind losses were determined from probabilistic models run for the Category 1 storm which equates to the 1% chance storm event. Figure 3 shows wind speeds for the modeled hurricane.

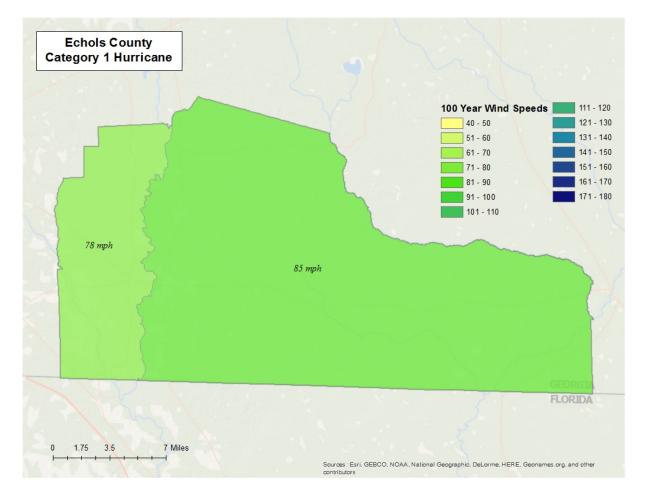

Figure 3: Wind Speeds by Storm Category

## Wind-Related Building Damages

Buildings in Echols County are vulnerable to storm events, and the cost to rebuild may have significant consequences to the community. The following table shows a summary of the results of wind-related building damage in Echols County for the Category 1 (100 Year Event) storm. The loss ratio expresses building losses as a percentage of total building replacement cost in the county. Figure 4 illustrates the building loss ratios of the modeled Category 1 storm.

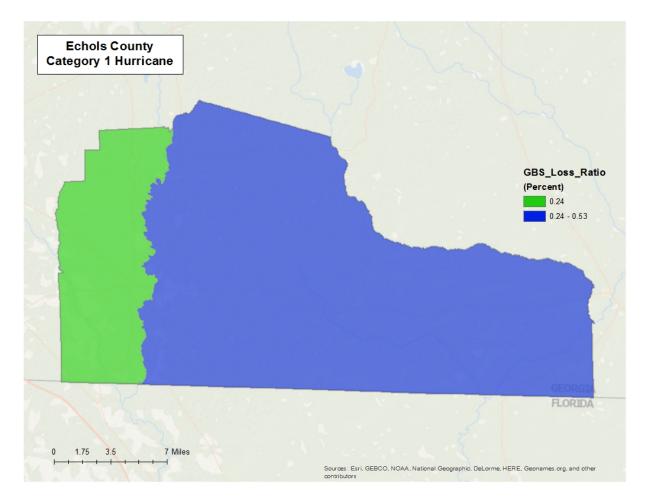

Figure 4: Hurricane Wind GBS Loss Ratios

Table 5 shows the Hurricane Wind Building Damage results including the number of buildings damaged, total building damage, and economic loss.

Table 5: Hurricane Wind Building Damage
---

Storm	Number of	l	Building	Tot	al Economic	
Classification	Damaged Buildings	D	amages		Loss	Loss Ratio
Category 1	24	\$	691,620	\$	1,027,960	0.34

#### **Essential Facility Losses**

Essential facilities are also vulnerable to storm events, and the potential loss of functionality may have significant consequences to the community. Hazus-MH identified the essential facilities that may be moderately or severely damaged by winds. The results are compiled in Table 6. There are 10 essential facilities in Echols County.

Classification	Number
EOC	1
Care	1
Fire	4
Police	1
School	3
Total	10

Table 6: Wind-Damaged Essential Facility Losses
---

Storm	Facilities Moderately	Facilities Completely	Facilities with
Classification	Damaged (>50%)	Damaged (>50%)	expected loss (<1day)
Category 1	0	0	10

### **Shelter Requirements**

Hazus-MH estimates the number of households evacuated from buildings with severe damage from high velocity winds as well as the number of people who will require short-term sheltering. The results are listed in Table 7 and mapped in Figure 5.

Table 7: Dis	placed Households and People	
--------------	------------------------------	--

Storm Classification	# of Displaced Households	# of People Needing Short-Term Shelter
Category 1	0	0

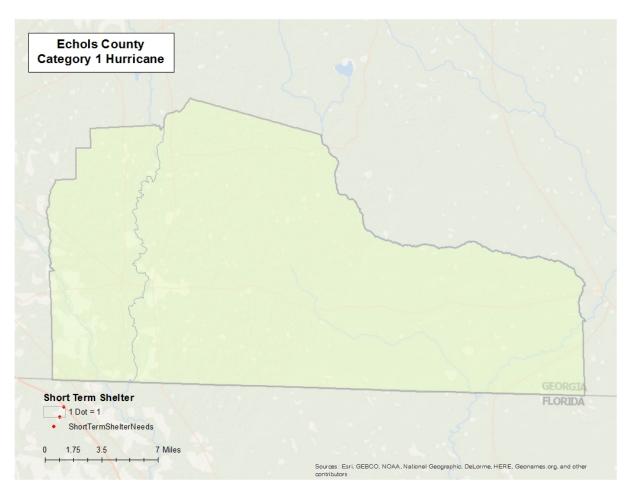

Figure 5: Hurricane Wind Shelter Requirements

### Debris Generated from Hurricane Wind

Hazus-MH estimates the amount of debris that will be generated by high velocity hurricane winds and quantifies it into three broad categories to determine the material handling equipment needed:

- Reinforced Concrete and Steel Debris
- Brick and Wood and Other Building Debris
- Tree Debris

Different material handling equipment is required for each category of debris. The estimates of debris for this scenario are listed in Table 8. The amount of hurricane wind related tree debris that is estimated to require pick up at the public's expense is listed in the eligible tree debris column.

Storm	Brick, Wood,	Reinforced		Other	
Classification	and Other	<b>Concrete/Steel</b>	Tree Debris	Tree Debris	Total
Category 1	66	-	3,646	136,643	140,355

Figure 6 shows the distribution of all wind related debris resulting from a Category 1 hurricane. Each dot represents 20 tons of debris within the census tract in which it is located. The dots are randomly distributed within each census tract and therefore do not represent the specific location of debris sites.

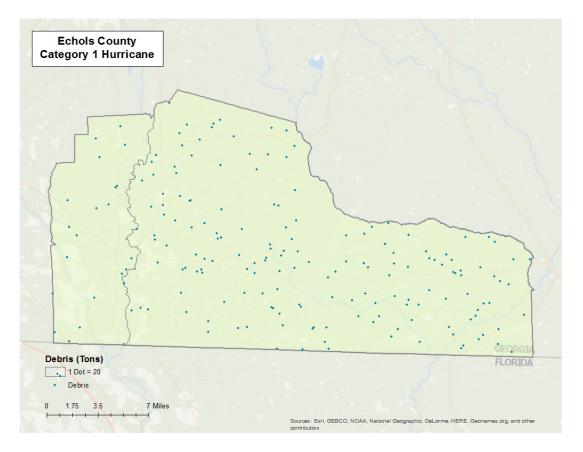

Figure 6: Wind-Related Debris Weight (Tons)

# Flood Risk Assessment

## Hazard Definition

Flooding is a significant natural hazard throughout the United States. The type, magnitude, and severity of flooding are functions of the amount and distribution of precipitation over a given area, the rate at which precipitation infiltrates the ground, the geometry and hydrology of the catchment, and flow dynamics and conditions in and along the river channel. Floods can be classified as one of three types: upstream floods, downstream floods, or coastal floods.

Upstream floods, also called flash floods, occur in the upper parts of drainage basins and are generally characterized by periods of intense rainfall over a short duration. These floods arise with very little warning and often result in locally intense damage, and sometimes loss of life, due to the high energy of the flowing water. Flood waters can snap trees, topple buildings, and easily move large boulders or other structures. Six inches of rushing water can upend a person; another 18 inches might carry off a car. Generally, upstream floods cause damage over relatively localized areas, but they can be quite severe in the local areas in which they occur. Urban flooding is a type of upstream flood. Urban flooding involves the overflow of storm drain systems and can be the result of inadequate drainage combined with heavy rainfall or rapid snowmelt. Upstream or flash floods can occur at any time of the year in Georgia, but they are most common in the spring and summer months.

Downstream floods, also called riverine floods, refer to floods on large rivers at locations with large upstream catchments. Downstream floods are typically associated with precipitation events that are of relatively long duration and occur over large areas. Flooding on small tributary streams may be limited, but the contribution of increased runoff may result in a large flood downstream. The lag time between precipitation and time of the flood peak is much longer for downstream floods than for upstream floods, generally providing ample warning for people to move to safe locations and, to some extent, secure some property against damage.

Coastal floods occurring on the Atlantic and Gulf coasts may be related to hurricanes or other combined offshore, nearshore, and shoreline processes. The effects of these complex interrelationships vary significantly across coastal settings, leading to challenges in the determination of the base (1-percent-annual-chance) flood for hazard mapping purposes. Land area covered by floodwaters of the base flood is identified as a Special Flood Hazard Area (SFHA). The Echols County flood risk assessment analyzed at risk structures in the SFHA.

The SFHA is the area where the National Flood Insurance Program's (NFIP) floodplain management regulations must be enforced and the area where the mandatory purchase of flood insurance applies. The owner of a structure in a high-risk area must carry flood insurance, if the owner carries a mortgage from a federally regulated or insured lender or servicer.

The following probabilistic risk assessment involves an analysis of a 1% annual chance riverine flood event.

### Riverine 1% Flood Scenario

Riverine losses were determined from the 1% flood boundaries downloaded from the FEMA Flood Map Service Center in December 2018. The flood boundaries were overlaid with the USGS 10 meter DEM using the Hazus-MH Enhanced Quick Look tool to generate riverine depth grids. The riverine flood depth grid was then imported into Hazus-MH to calculate the riverine flood loss estimates. Figure 7 illustrates the riverine inundation boundary associated with the 1% annual chance. Please note that the riverine flooding may not take into account elevated housing or raised Base Flood Elevation.

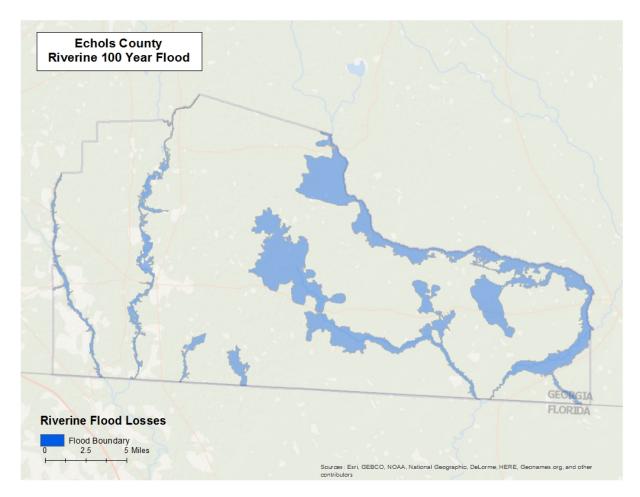

Figure 7: Riverine 1% Flood Inundation

## Riverine 1% Flood Building Damages

Buildings in Echols County are vulnerable to flooding from events equivalent to the 1% riverine flood. The economic and social impacts from a flood of this magnitude can be significant. Table 9 provides a summary of the potential flood-related building damage in Echols County by jurisdiction that might be experienced from the 1% flood. Figure 8 maps the potential loss ratios of total building exposure to losses sustained to buildings from the 1% flood by 2010 census block and Figure 9 illustrates the relationship of building locations to the 1% flood inundation boundary.

		Total								
Occupancy	Total	Buildings		Total	То	tal Losses to	Loss Ratio of			
Classification	Buildings	Damaged	Bu	ilding Exposure		Buildings	Exposed to Damaged			
	Unincorporated									
Residential	1,318	24	\$	116,994,651	\$	607,706	0.52%			
				<b>County Total</b>						
Total	1,318	24	\$	116,994,651	\$	607,706				

#### Table 9: Echols County Riverine 1% Building Losses

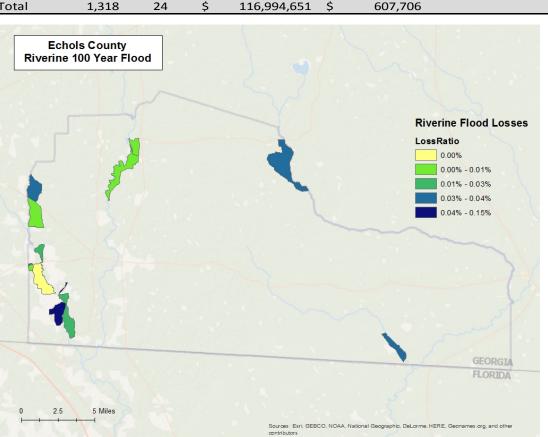

Figure 8: Potential UDF Loss Ratios from the 1% Riverine Flood

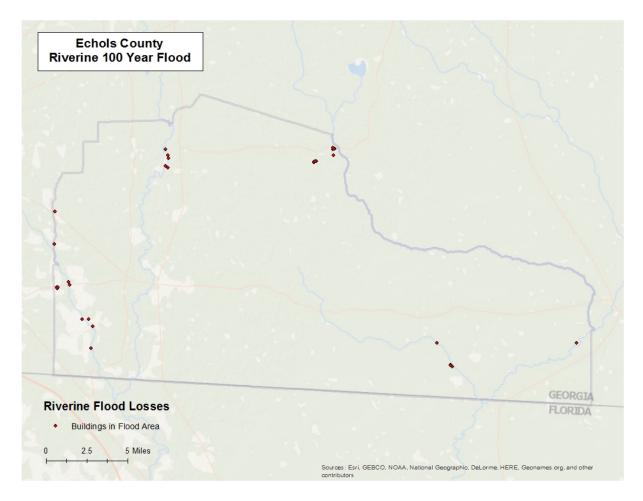

Figure 9: Damaged Buildings in 1% Riverine Flood

### Riverine 1% Flood Essential Facility Losses

An essential facility may encounter many of the same impacts as other buildings within the flood boundary. These impacts can include structural failure, extensive water damage to the facility and loss of facility functionality (e.g. a damaged police station will no longer be able to serve the community). The analysis has identified that were 0 Essential Facilities subject to damage in the Echols County riverine 1% probability floodplain.

Classification	Total	Moderate	Substantial	Loss of Use
Fire Station	4	0	0	0
Hospitals	1	0	0	0
Police Stations	1	0	0	0
Schools	3	0	0	0
EOCs	0	0	0	0

Table 10: Expected Damage to Essential Facilities in 1% Riverine Flood

### **Riverine 1% Flood Shelter Requirements**

Hazus-MH estimates that the number of households that are expected to be displaced from their homes due to riverine flooding and the associated potential evacuation. The model estimates 72 households might be displaced due to the flood. Displacement includes households evacuated within or very near to the inundated area. Displaced households represent 216 individuals, of which 56 may require short term publicly provided shelter. The results are mapped in Figure 10. These numbers may be overestimated for two reasons: elevated housing not taken into account and parcel centroids (not aligned exactly with actual structures).

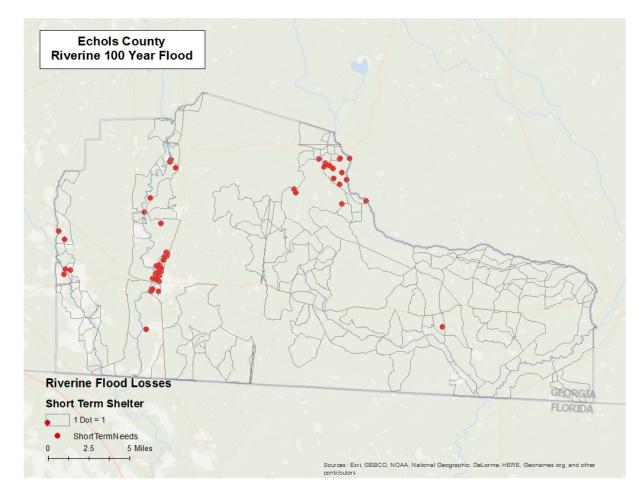

Figure 10: Estimated Flood Shelter Requirements in 1% Riverine Flood

### **Riverine 1% Flood Debris**

Hazus-MH estimates the amount of debris that will be generated by the flood. The model breaks debris into three general categories:

- Finishes (dry wall, insulation, etc.)
- Structural (wood, brick, etc.)
- Foundations (concrete slab, concrete block, rebar, etc.)

Different types of material handling equipment will be required for each category. Debris definitions applied in Hazus-MH are unique to the Hazus-MH model and so do not necessarily conform to other definitions that may be employed in other models or guidelines.

The analysis estimates that an approximate total of 1,272 tons of debris might be generated: 1) Finishes – 349 tons; 2) Structural - 378 tons; and 3) Foundations - 544 tons. The results are mapped in Figure 11.

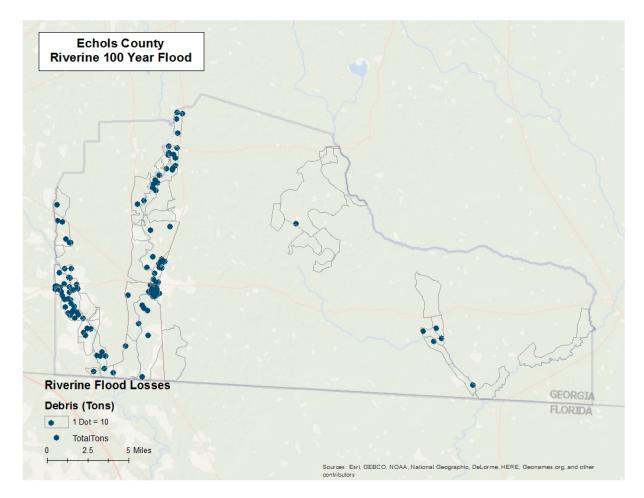

Figure 11: Flood Debris Weight (Tons) in 1% Riverine Flood

# Tornado Risk Assessment

# Hazard Definition

Tornadoes pose a great risk to the state of Georgia and its citizens. Tornadoes can occur at any time during the day or night. They can also happen during any month of the year. The unpredictability of tornadoes makes them one of Georgia's most dangerous hazards. Their extreme winds are violently destructive when they touch down in the region's developed and populated areas. Current estimates place the maximum velocity at about 300 miles per hour, but higher and lower values can occur. A wind velocity of 200 miles per hour will result in a wind pressure of 102.4 pounds per square foot of surface area—a load that exceeds the tolerance limits of most buildings. Considering these factors, it is easy to understand why tornadoes can be so devastating for the communities they hit.

Tornadoes are defined as violently-rotating columns of air extending from thunderstorms and cyclonic events. Funnel clouds are rotating columns of air not in contact with the ground; however, the violently-rotating column of air can reach the ground very quickly and become a tornado. If the funnel cloud picks up and blows debris, it has reached the ground and is a tornado.

Tornadoes are classified according to the Fujita tornado intensity scale. Originally introduced in 1971, the scale was modified in 2006 to better define the damage and estimated wind scale. The Enhanced Fujita Scale ranges from low intensity EFO with effective wind speeds of 65 to 85 miles per hour, to EF5 tornadoes with effective wind speeds of over 200 miles per hour. The Enhanced Fujita intensity scale is included in Table 11.

Fujita	Estimated	-		
Number	Wind Speed	Path Width	Path Length	Description of Destruction
EF0 Gale	65-85 mph	6-17 yards	0.3-0.9 miles	Light damage, some damage to chimneys, branches broken, sign boards damaged, shallow-rooted trees blown over.
EF1 Moderate	86-110 mph	18-55 yards	1.0-3.1 miles	Moderate damage, roof surfaces peeled off, mobile homes pushed off foundations, attached garages damaged.
EF2 Significant	111-135 mph	56-175 yards	3.2-9.9 miles	Considerable damage, entire roofs torn from frame houses, mobile homes demolished, boxcars pushed over, large trees snapped or uprooted.
EF3 Severe	136-165 mph	176-566 yards	10-31 miles	Severe damage, walls torn from well- constructed houses, trains overturned, most trees in forests uprooted, heavy cars thrown about.
EF4 Devastating	166-200 mph	0.3-0.9 miles	32-99 miles	Complete damage, well-constructed houses leveled, structures with weak foundations blown off for some distance, large missiles generated.
EF5 ncredible	Over 200 mph	1.0-3.1 miles	100-315 miles	Foundations swept clean, automobiles become missiles and thrown for 100 yards or more, steel-reinforced concrete structures badly damaged.

#### Table 11: Enhanced Fujita Tornado Rating

Source: http://www.srh.noaa.gov

### Hypothetical Tornado Scenario

For this report, an EF3 tornado was modeled to illustrate the potential impacts of tornadoes of this magnitude in the county. The analysis used a hypothetical path based upon an EF3 tornado event running along the predominant direction of historical tornados (southeast to northwest). The tornado path was placed to travel through Statenville. The selected widths were modeled after a re-creation of the Fujita-Scale guidelines based on conceptual wind speeds, path widths, and path lengths. There is no guarantee that every tornado will fit exactly into one of these categories. Table 12 depicts tornado path widths and expected damage.

Enhanced Fujita		Maximum Expected
Scale	Path Width (feet)	Damage
EF5	2,400	100%
EF4	1,800	100%
EF3	1,200	80%
EF2	600	50%
EF1	300	10%

Table 12: Tornado Path Widths and Damage Curves

Within any given tornado path there are degrees of damage. The most intense damage occurs within the center of the damage path, with decreasing amounts of damage away from the center. After the hypothetical path is digitized on a map, the process is modeled in GIS by adding buffers (damage zones) around the tornado path. Figure 12 describes the zone analysis.

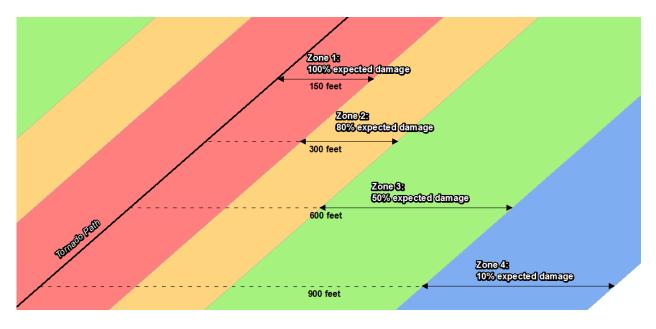

Figure 12: EF Scale Tornado Zones

An EF3 tornado has four damage zones, depicted in Table 13. Major damage is estimated within 150 feet of the tornado path. The outer buffer is 900 feet from the tornado path, within which buildings will not experience any damage. The selected hypothetical tornado path is depicted in Figure 13 and the damage curve buffer zones are shown in Figure 14.

Zone	Buffer (feet)	Damage Curve
1	0-150	80%
2	150-300	50%
3	300-600	10%
4	600-900	0%

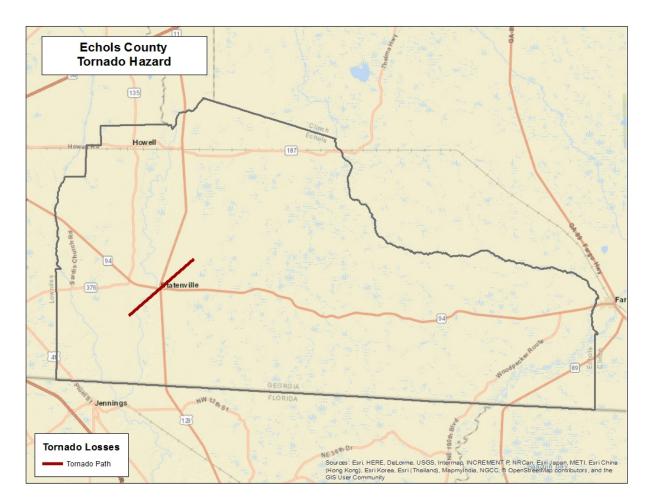

Figure 13: Hypothetical EF3 Tornado Path

Figure 14: Modeled EF3 Tornado Damage Buffers

#### EF3 Tornado Building Damages

The analysis estimated that approximately 101 buildings could be damaged, with estimated building losses of approximately \$2.8 million. The building losses are an estimate of building replacement costs multiplied by the percentages of damage. The overlay was performed against parcels provided by Echols County that were joined with Assessor records showing estimated property replacement costs. The Assessor records often do not distinguish parcels by occupancy class if the parcels are not taxable and thus the number of buildings and replacement costs may be underestimated. The results of the analysis are depicted in Table 14.

Occupancy	Buildings	Building		
Classification	Damaged	Losses		
Commerical	11	\$	867,625	
Governmental	2	\$	38,945	
Residential	88	\$	1,898,455	
Total	101	\$	2,805,025	

#### Table 14: Estimated Building Losses by Occupancy Type

## EF3 Tornado Essential Facility Damage

There were 5 essential facilities located in the tornado path according to the modeling, these 5 facilities would suffer moderate to major damage should such a tornado strike occur.

The location of the damaged Essential Facilities is mapped in Figure 15.

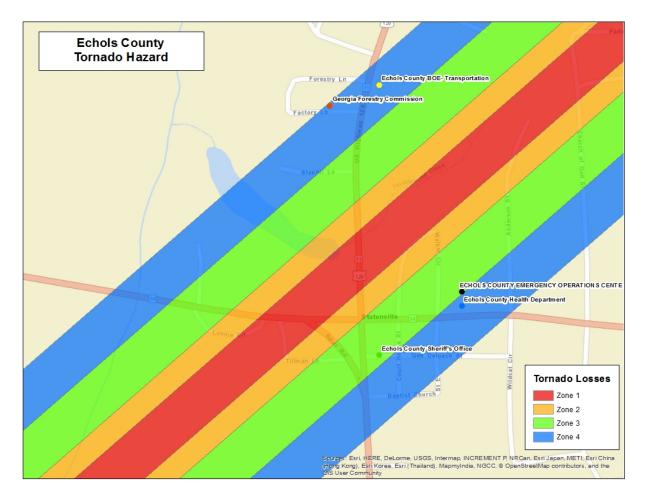

Figure 15: Modeled Essential Facility Damage in Echols County

# **Exceptions Report**

Hazus Version 2.2 SP1 was used to perform the loss estimates for Echols County, Georgia. Changes made to the default Hazus-MH inventory and the modeling parameters used to setup the hazard scenarios are described within this document.

Reported losses reflect the updated data sets. Steps, algorithms and assumptions used during the data update process are documented in the project workflow developed by the Polis Center.

# Statewide Inventory Changes

The default Hazus-MH Essential Facility inventory was updated for the entire state prior to running the hazard scenarios for Echols County.

Statewide facility data were supplied by GEMA through the GMIS in December 2018. The Regional Commission updated the essential facilities in 2018. The updated data was used for this analysis. Table 15 summarizes the difference between the original Hazus-MH default data and the updated data for Echols County.

Occupancy	Occupancy Default		Updated				
Classification		Replacement Cost	Default Count		Replacement Cost	Updated Count	
Care	\$	610,000	1	\$	610,000	1	
EOC	\$	880,000	1	\$	880,000	1	
Fire	\$	1,164,000	4	\$	1,164,000	4

#### Table 15: Essential Facility Updates

## **County Inventory Changes**

The GBS records for Echols County were replaced with data derived from parcel and property assessment data obtained from Echols County. The county provided property assessment data was current as of December 2018 and the parcel data current as of December 2018.

### General Building Stock Updates

The parcel boundaries and assessor records were obtained from Echols County. Records without improvements were deleted. The parcel boundaries were converted to parcel points located in the centroids of each parcel boundary unless there were building footprints. Each parcel point was linked to an assessor record based upon matching parcel numbers. The generated Building Inventory represents the approximate locations (within a parcel) of building exposure. The Building Inventory was aggregated by Census Block and imported into Hazus-MH using the Hazus-MH Comprehensive Data Management System (CDMS). Both the 2010 Census Tract and Census Block tables were updated.

The match between parcel records and assessor records was based upon a common Parcel ID. For this type of project, unless the hit rate is better than 85%, the records are not used to update the default aggregate inventory in Hazus-MH. The Parcel-Assessor hit rate for Echols County was 99.7%.

Adjustments were made to records when primary fields did not have a value. In these cases, default values were applied to the fields. Table 16 outlines the adjustments made to Echols County records.

Type of Adjustment	<b>Building Count</b>	Percentage			
Area Unknown	164	9%			
Construction Unknown	159	9%			
Condition Unknown	142	8%			
Foundation Unknown	156	9%			
Year Built Unknown	75	4%			

Table 16 <sup>•</sup> Building	Inventory	Default Adjustment Rates
Tuble 10. Dunuing	III V CIICOI y	

Portions of the CAMA values were either missing (<Null> or '0'), did not match CAMA domains or were unusable ('Unknown', 'Other', 'Pending'). These were replaced with 'best available' values. Missing YearBuilt values were populated from average values per Census Block. Missing Condition, Construction and Foundation values were populated with the highest-frequency CAMA values per Occupancy Class. Missing Area values were populated with the average CAMA values per Occupancy Class.

The resulting Building Inventory was used to populate the Hazus-MH General Building Stock and User Defined Facility tables. The updated General Building Stock was used to calculate flood and tornado losses. Changes to the building counts and exposure that were modeled in Echols County are sorted by General Occupancy in Table 1 at the beginning of this report. If replacements cost or building value were not present for a given record in the Assessor data, replacement costs were calculated from the Building Area (sqft) multiplied by the Hazus-MH RS Means (\$/sqft) values for each Occupancy Class.

Differences between the default and updated data are due to various factors. The Assessor records often do not distinguish parcels by occupancy class when the parcels are not taxable; therefore, the total number of buildings and the building replacement costs for government, religious/non-profit, and education may be underestimated.

### **User Defined Facilities**

Local parcel and CAMA data were used to develop points representing the locations of buildings in the county, referred to as User Defined Facilities (UDF) in the Hazus model. For the flood model, this includes only buildings located in the 1% Annual Chance Riverine Flood Area. Table 17 identifies the total building count & exposure for the county and the total building count & exposure for buildings located in the 1% Annual Chance Riverine Flood Area.

Feature	Counts	Exposure
Total buildings in the County	1,766	\$203,254,784
Total buildings inside the 1% Annual Chance		
Riverine Flood Area	49	\$4,040,065

It should be noted that UDFs are only used in the flood modeling process, due to the fact that it is important to identify if individual buildings are located within the flood area to obtain the depth of flood.

Assumptions

- Flood analysis was performed on UDF. The point locations are parcel centroid accuracy.
- The analysis is restricted to the county boundary within the flood area. Events that occur near the county boundary do not contain loss estimates from adjacent counties.
- The following attributes were defaulted or calculated: First Floor Height was set from Foundation Type Content Cost was calculated from Building Cost
